

## Rand Exposé – the Fundamental Truth

This is a quarterly supplement to the annual issue (latest March 2013)

Download full March 2013 issue here

#### INTRODUCTION & EXPLANATORY NOTES

As from June 2013, the format of this report has been changed and improved. Instead of a full **Rand Exposé** being issued each Quarter (as it has been done in the past), it has been decided, in order to make assimilation of the updated data easier, to issue only one full **Rand Exposé** update annually following release of the previous year's full data by the Reserve Bank in March of each year. For each Quarter thereafter (in June, September and December), an Appendix will be issued with updated tables and charts under headings which reference the Sections in the full **Rand Exposé**. Where these have been updated since the previous issue, the charts and tables will be marked with a vellow star.

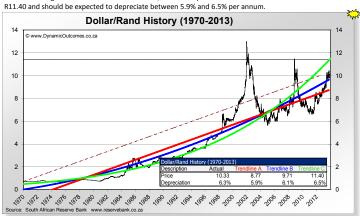

## SUMMARY TRENDLINE VALUES FOR THE RAND

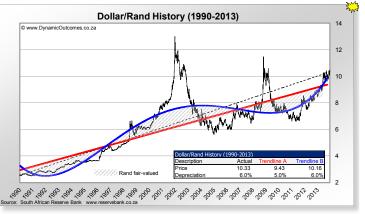

| 43+ Year History                  | Value | Depr p.a. W |
|-----------------------------------|-------|-------------|
| 1970 – 2013 Actual                | 10.33 | 6.3%        |
| 1970 – 2013 Linear Trendline      | 8.75  | 5.9%        |
| 1970 – 2013 Polynomial Trendline  | 9.70  | 6.1%        |
| 1970 – 2013 Exponential Trendline | 11.40 | 6.5%        |

| 23+ Year History                   | Value | Depr p.a. v |
|------------------------------------|-------|-------------|
| Jan 1990 – Dec 2013 Actual         | 10.33 | 6.0%        |
| Jan 1990 - Dec 2013 Linear T/L     | 9.43  | 5.0%        |
| Jan 1990 - Dec 2013 Polynomial T/L | 10.16 | 6.0%        |
| Trade Weighted Linear Trendline    | 15.47 |             |
| Trade Weighted Polynomial T/Line   | 10.38 |             |

#### WHAT IS THE RAND'S PRESENT TRENDLINE VALUE? (SECTION 4)

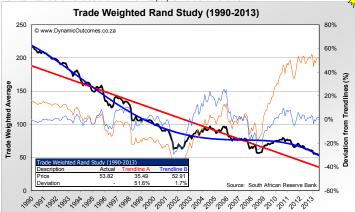

Based on a long term historical trend since 1970, the Rand's present true trendline value is between R8.75 and R11.40 and should be expected to depreciate between 5.9% and 6.5% per annum.

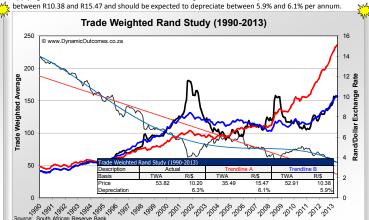

## WHAT IS THE RAND'S PRESENT TRADE WEIGHTED TRENDLINE VALUE? (SECTION 5)

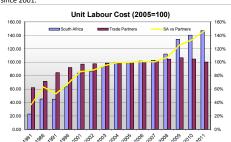

Based on a long term historical trend since 1990, the Trade Weighted Value of the Rand is presently 51.6% from its linear trendline value and 1.7% from its polynomial trendline value.

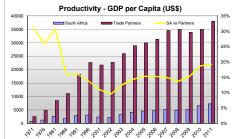

Applying this Deviation Factor to the actual Rand exchange rates, the Rand's present true trendline value is

Compared with its trading partners, South Africa's labour cost has increased by 15.9% p.a. since 1981, 10.4% p.a since 1991, and 9.0% p.a. since 2001.

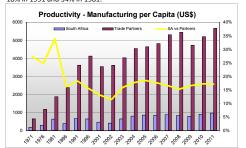

# INTERNATIONAL COMPETITIVENESS (SECTION 6 CONTD) On a GDP per Capita (US\$) basis, South Africa's productivity was 19% of

its trading partners in 2011, compared with 11% in 2001, 16% in 1991 and 31% in 1981.

On a Manufacturing per Capita (US\$) basis, South Africa's productivity was 17% of its trading partners in 2011, compared with 13% in 2001, 18% in 1991 and 34% in 1981.

## **INTERNATIONAL COMPETITIVENESS (SECTION 6)**

The differential in competitiveness between South Africa and its trading partners is estimated to have been 8.4% annually from 1991 to 2011, with the future in all likelihood looking bleaker, possibly as high as 12.9% p.a.

|  | Annual Differentials |           |               |  |  |  |  |
|--|----------------------|-----------|---------------|--|--|--|--|
|  | 1981-2011            | 1991-2011 | Future        |  |  |  |  |
| Primary Factors (Quantifiable Effects)                     | 21.4%                | 8.4%      | 8.4%          |  |  |  |  |
| Labour Cost  | 15.9%                | 10.4%     | 10.4%         |  |  |  |  |
| Productivity   | 5.6%                 | -2.1%     | -2.1%         |  |  |  |  |
| Secondary Factors (Semi-definable Effects)                 | 2.0%                 | 2.0%      | 3.0%          |  |  |  |  |
| AIDS Pandemic  |                      |           | 1             |  |  |  |  |
| Black Economic Empowerment                                 |                      |           | 1             |  |  |  |  |
| Emigration of Skilled Labour/Professionals                 |                      |           | 1             |  |  |  |  |

| Total  |                      | 11.4%     | 12.9%         |  |  |  |  |

## SOUTH AFRICA'S ECONOMY - A SIMPLISTIC VIEW (SECTION 7)

When viewed as a Company, the South African economy has been running at a net loss since 2003 and has had to fund these accumulative losses largely through short term foreign inflows. Current Account Deficit (Net Loss) in 2012 was -R198bn (-6.3% of GDP).

| (Net Loss) in 20        | )12 was -R198bn (-                        | ·6.3% o | f GDP). |        |          |         |       |       |       |       |       |       |
|-------------------------|---|---------|---------|--------|----------|---------|-------|-------|-------|-------|-------|-------|

## Rand Exposé – the Fundamental Truth

This is a quarterly supplement to the annual issue (latest March 2013)

Download full March 2013 issue here

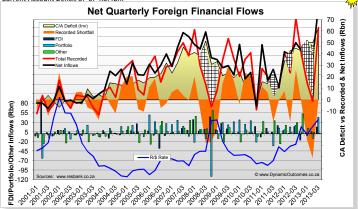

The Services Account (blue area) and Current Account (red line) have detriorated since the Rand strengthened below its trendline Trade Weighted Value, with Quarter 2013-03 registering an annualized Current Account Deficit (Net Loss) of -R233bn.

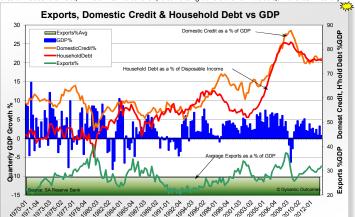

#### BALANCE OF PAYMENTS – THE ACHILLES HEEL (SECTION 9)

Where Total Recorded Foreign Inflows have been insufficient to fund the Current Account Deficit, this has led to a weakening of the Rand. The latest data for 2013-03 shows a Shortfall between Recorded Inflows and Current Account Deficit of .of -R0.4bn.

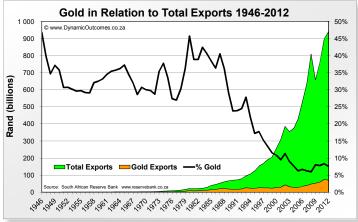

#### HAS RECENT GDP GROWTH BEEN HEALTHY? (SECTION 10)

GDP in recent years has been driven largely by Private Consumption funded to a large extent by extension of credit. Household Debt, while off its worst levels, is still sitting at 75.5% of GDP as at Qtr 2013-03. Healthy?

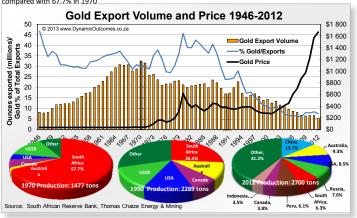

## HAVE WE BENEFITTED FROM GOLD & WILL WE? (SECTION 11)

Gold Exports as a percentage of Total Exports value has dropped from 45.7% in 1980 to just 7.6% in 2012 and no longer has a significant impact on our economic growth.

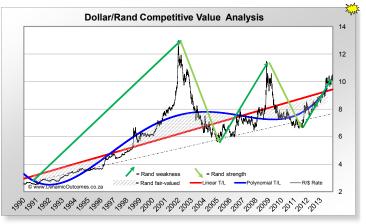

## HAVE WE BENEFITTED FROM GOLD & WILL WE? (SECTION 11) - CONTD

In 2012, with the Gold price at its best levels ever, and record global mining output of 2700 tons, South Africa exported its smallest volume in living memory – just 167 tons, and produced just 6.3% of global pruduction compared with 67.7% in 1970

## WHAT ACTUALLY MOVES EXCHANGE RATES? (SECTION 12)

While fundamentals determine that the Rand needs to depreciate in order for our economy to remain competitive, there have been huge swings either side of this trendline depreciation.

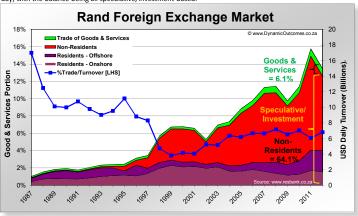

## THE GLOBAL & RAND FOREIGN CURRENCY MARKET (SECTION 13)

Daily global foreign exchange turnover has increased to 5.34 trillion US Dollars in 2013 - an increase of 35% over 2010 volumes. By comparison, 2001 volumes were \$1.24 trillion per day.

In 2012, Trade of Goods & Services made up just 6.1% of Daily Rand Foreign Exchange Turnover of \$14bn per day, with the balance being all speculative/investment based.

## Rand Exposé – the Fundamental Truth

Appendix 2013/3 December 2013 Update

#### IN CONCLUSION (SECTION 17)

The purpose of this report has been to share our own experience and knowledge gained in investigating the Rand and the South African economy.

In essence, an overview of where the Rand should be from an historical and fundamental perspective, why it has moved has it has, and where we can expect the market to move in future, from an Elliott Wave perspective.

The result of these years of research has led to some astounding discoveries and observations, summarized follows:

- 1. An exchange rate is an *adjusting mechanism* which compensates for product cost differentials, and other factors that affect international trade competitiveness.
- 2. Ongoing product cost differentials can be reduced down to two rudimentary factors productivity and labour cost.
- 3. Based on historical trends and South Africa's competitiveness compared with its trading partners, it needs to adjust (depreciate) over time to remain competitive.
- 4. Despite the above, the Rand has for periods of time had huge deviations from these fundamental norms, indicating that something other than fundamentals is at work and influences market movements.
- 5. Although the Rand exchange rate is primarily to facilitate the international trade in goods and services, these imports and exports only represent a miniscule percent of total turnover in the Rand forex market (around 6%), with the majority being speculative/investment related.
- 6. Although the trade of goods and services is an *economic market* phenomenon, and whereas the exchange rate is there to facilitate this, yet the Rand forex market is itself a *financial instrument* where speculation prevails.

- 7. In an economic setting, where certainty and rationality prevails about the relative values, buying or selling decisions are made based on conscious rational evaluation; however, in a financial market setting, uncertainty and speculation prevail, and persons tend to make subconscious irrational decisions (unconscious herding).
- 8. The movements in all financial markets (of which the Rand is one) are the result of mass human emotion, flowing from hope and greed to fear and despair, from one extreme to the other.
- 9. These changes in mass human sentiment move in patterns which are definable in terms of the Elliott Wave Principle, from the very shortest to the longest time frames.
- 10. If one is able to determine OBJECTIVELY what pattern is in play in a market and where one is in that pattern, one is able to forecast how that market is likely to move from that point on, as we have shown.

As we have already said, this Rand Exposé is a non-economist, realist overview, and having an understanding of this has been critical to ourselves and those with whom we have shared this information –

To not only have an understanding of the fundamentals, but more so, to have an understanding of the actual forces

And then, through having access to an objective and scientific-based expectation of future Rand movements, (based on actual historical patterns and track record), which provides you with a roadmap of expected future movements...

...you have both the framework and parameters to enable you to make educated and informed decisions...and to take action – with the probabilities in your favour...and before it is too late.

#### The result:

A Degree of Certainty ... Amidst Uncertainty. And a Saving of Time, Stress and Money

This is an update to the last full Rand Expose dated March 2013. To get a full explanation of the charts and of our findings regarding fundamentals and forecasting the Rand click here

While this report tells us where we can expect the Rand to head long term from a fundamental perspective, it does not tell us where we can expect to go in the short or medium term.

That's where our forecasts have assisted clients for the past 8 years, giving them an 80% accurate roadmap for the days, weeks and months ahead.

Please consult your broker/advisor for trading advives risk. Leveraged trading has large potential rewards, but also large potential rewards. Be aware and accept this risk before trading. Never trade with money you cannot afford to lose. All forecasting is based on statistics derived from past performance and past performa

Your actions and the results of your actions in regard to anything you receive from Dynamic Outcomes are entirely your own responsibility. Dynamic Outcomes cannot and will not assume liability for any losses that may be incurred by the use of any information received from Dynamic Outcomes.

### Hypothetical Disclaime

All results are considered to be Hypothetical unless otherwise specified. CFTC Rule 4.41: Hypothetical or simulated performance results have certain inherent limitations. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not actually been executed, the results may have under or over compensated for the impact, if any, of certain market factors, such as lack of liquidity. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharing differences between hypothetical performance results and the actual results subsequently achieved by any particular trammeror, only risk explaint should be used for leveraged trading due to the high risk of loss involved. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindisight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand bases (and incur account drawdowns) or lo adhere to a particular trading program in spite of trading losses are important issues which cannot be completely taken into consideration with hypothetical performance results and your profit or loss.
